TO THE TRADE.

I present herewith my revised Catalogue No. 10, and trust you will find it of sufficient value to examine and keep for future reference.

In ordering kindly use the number given below each cut.

All prices are subject to market changes.

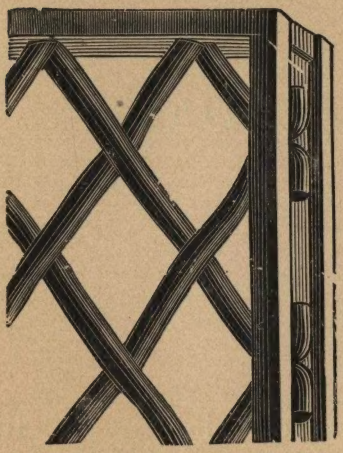
Estimates cheerfully given upon application.

JOSHUA HORROCKS,

45 Cliff Street,

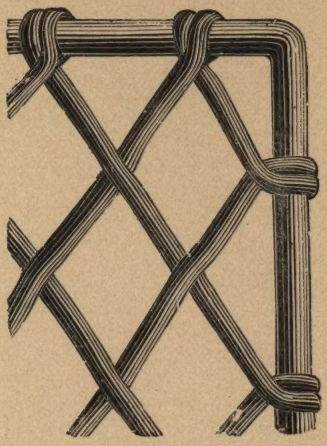
New York.

METHODS OF FRAMING WIRE WORK.



No. 4.—Grooved Frame.

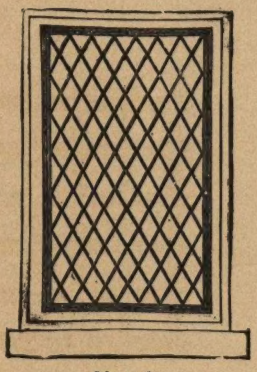
This cut shows how the frames of wire guards are made of channel iron, and how the wire is passed through and clinched in them, making this class of work very strong and secure. The best and most desirable way to attach these guards to the windows is to screw them to the window jamb.



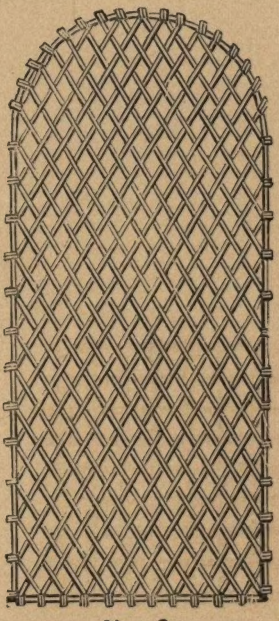
No. 5.—Round Frame.

This cut shows how crimped wire window guards with round iron frames are made, and how the wire is secured to them. Window guards with round iron frames are usually stapled to the window frame with wire staples. If wanted for windows where they are to be occasionally removed for washing the glass, we attach suitable fixtures.

DIAMOND PATTERN WINDOW GUARDS.



No. 1.
Square Top, Grooved Frame.



No. 2.
Semi-Circle Top, Round Frame.

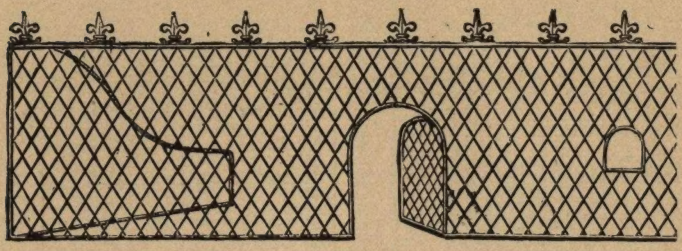
CRIMPED WIRE DESK RAILING.



No. 12.

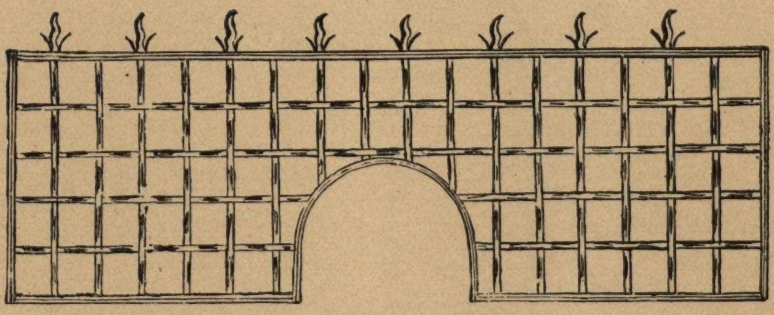
This Railing is not intended for large offices, but more especially for store counters and offices where a cheap Railing is required. It is desirable to have the ends turned in, to help support or strengthen it and make it firmer, unless each end be screwed to woodwork.

18-inches high, picket top, painted, per running foot..... $1 20
24-inches high, picket top, painted, per running foot..... 1 50

Cash hole extra.

Discount.....

DESK RAILING.



No. 14.

This Railing is intended for use where a more ornamental railing is required. Any of the designs on the following page can be used in this class of work.

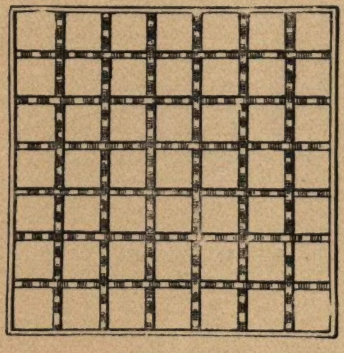
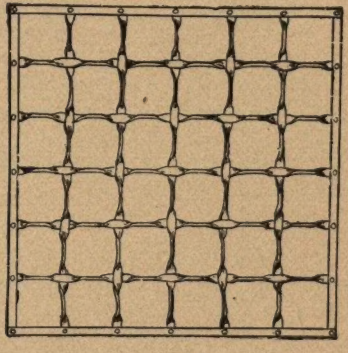
Prices given on application.

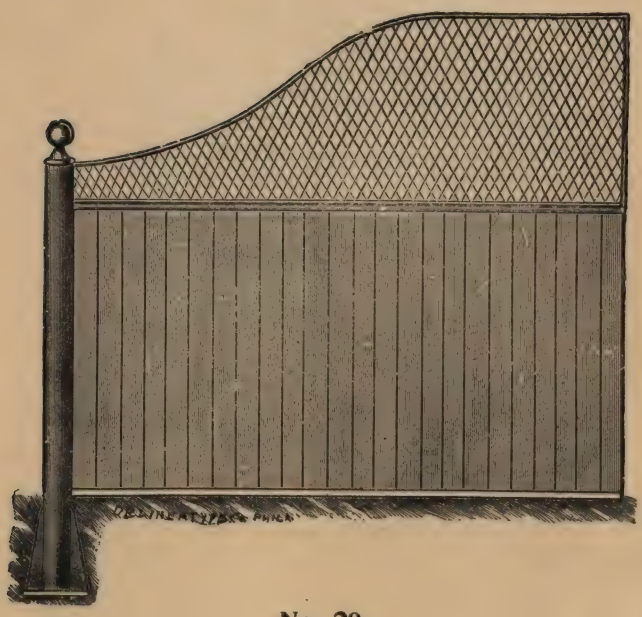


No. 18.



No. 19.

STALL GUARDS.



No. 20.

This cut shows the adaptation of crimped wirework for stalls, insuring a good circulation of air, and combining lightness and beauty of appearance with great strength. It was formerly thought necessary to make all stall partitions of cast iron, but experience has proved wrought iron to be much better. The cast iron ones are liable to get broken and injure the horses. Made to order any size.

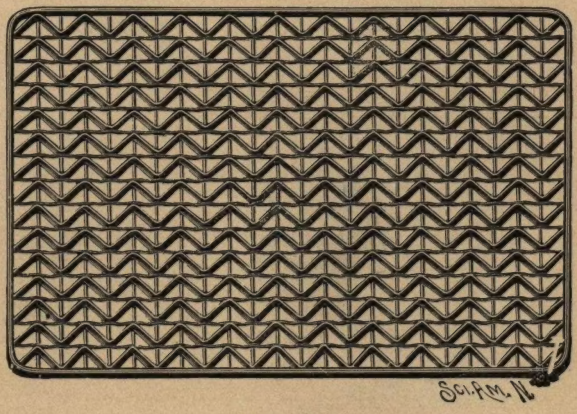
Patented July 18, 1893.



No. 26.

The most effective Steel mat upon the market for removing mud, snow, ice, and all material from the feet, no matter in which direction the feet pass over it.

It being galvanized after making, causes it to be absolutely rust proof, and, owing to its peculiar construction, it is the only mat in the market that WILL NOT BREAK.

Can be made in special sizes for Elevator cars, door-ways, etc., and can be used in private dwellings or anywhere where a mat is required.
